

POST TEST FOR MODULE 8

- 1) True or False: It is not necessary to complete a short form test with infants**
- 2) True or False: Use of IM with infants and children with decreased cognitive capacity should be structured in a program template.**
- 3) True or False: There is no benefit in completing hand over hand assistance during IM training**
- 4) True or False: When focus is significantly impaired, it is permissible to set the IM session with high repetitions and working on moving in and out of the beat to attain 'pockets' of focus.**
- 5) True or False: During IM training with this population, it is a good idea to have multiple activities on hand to incorporate into IM tasks.**
