

## Worksheet for Module 7.

Following Module 7, and the cumulative information reviewed in the modules that lay before it, you should now be feeling comfortable in analyzing your current methods of IM practice and in considering adjustments towards best practices.

As a part of this process, you are required to prepare a brief case study following the guidelines as laid out in Module 7 Resource and Reference section. IM pediatric case studies should be prepared as a learning tool towards an increased awareness in how you are currently operating IM for your pediatric populations and in how modifications may be a viable way to improve functional outcomes and compliance.

We encourage you first to review your overall impressions of your IM student/client by completing a strengths and challenges table for each subject as follows:-

| Presenting Strengths         | Presenting Challenges                                     |
|------------------------------|---|
| i.e. engaging                | i.e. Trips and falls frequently in multiple environments. |
| i.e. strong                  | i.e. poor graded force pressure/praxia                    |
| i.e. keen to learn new tasks | i.e. heightened anxiety to imperfections                  |
| i.e. very talkative          | i.e. decreased clarity in speech                          |
|                              |   |

Your case study may include photographic media, but prior to utilizing this option, please ensure that a signed authorization is provided by the child's legal guardian. There is a sample release form in your resource

files for module 7. If your facility requires an authorization to be completed, please note that the IM authorization will also need to be filled out and presented with case study materials.

To submit your case study, please email our Clinical Education Department via [clinicaled@interactivemetronome.com](mailto:clinicaled@interactivemetronome.com). Studies are requested prior to the completion of the Pediatric Best Practice training. We look forward to learning about your interactions and experiences with IM.

Log in to the IM website [www.interactivemetronome.com](http://www.interactivemetronome.com) using your provider ID and password and access the case studies available for review under Marketing and PR:-

## Case Studies

Case studies are a great way for potential clients to understand why IM will help their specific diagnosis. Choose from our extensive library of professionally designed cases featuring:

|                       |                                      |                          |
|-----------------------|--------------------------------------|--------------------------|
| ADHD                  | Cerebral Palsy                       | NLD                      |
| Adult ADD/ADHD        | Communication Impairments (Deficits) | OCD                      |
| Alzheimer's           | Confidence & Self Esteem             | Parkinson's              |
| Amputee               | CVA/Stroke                           | Quadriplegic             |
| Anxiety               | Dyslexia                             | TBI                      |
| Aphasia               | Early Intervention                   | Sensory Integration      |
| Athletic Injuries     | Learning Disabilities                | Speech Language Disorder |
| Autism/Asperger's/PDD | Motor Impairments                    | Stuttering               |
| CAPD/APD              | Multiple Sclerosis (MS)              | VPD                      |
